**Department of Pathology receives $15 million+ in NIH funding**

The Department of Pathology at UAB has received a $15 million+ grant from the National Institutes of Health (NIH) to support research into cancer, neuroscience, and infectious diseases. The funds will be used to support research projects led by Dr. David Geldmacher, M.D., and Dr. Christopher Willey, M.D., Ph.D., who are both experts in their respective fields.

**New cancer therapy could one day offer complete radiation treatment in milliseconds**

A team of researchers at UAB has developed a new cancer therapy that is fast, ultra-high burst and potentially has fewer side effects for patients than current methods. The therapy, which is being tested in clinical trials, is expected to one day offer complete radiation treatment in milliseconds.

**Grants for members; non-members are $100.**

The Health Equity Research Center and the O'Neal Comprehensive Cancer Center are accepting applications for pilot and feasibility studies related to disparities across the cancer control continuum, from prevention to survivorship. Letters of intent for project proposals are due July 27. The competition is open to members of the UAB community and the general public. Attend the webinar on July 11 to learn more about the opportunities.

**Two UAB physicians have already made a significant step in slowing Alzheimer's**

A new drug that is a 'significant step' in slowing Alzheimer's disease has been approved by the FDA. Neurologist David Geldmacher, M.D., and his team at UAB have been working on the development of the drug for over a decade.

**Ask your questions**

Join us for a live Q&A session with Dr. David Geldmacher, M.D., on July 14 at 4 p.m. to learn more about his research and the new Alzheimer's drug.
